

Introducing THERACYCLE PRO

Theracycle PRO is for professionals who treat patients with movement disorders:

- Parkinson's disease
- Multiple sclerosis
- stroke
- heart disease
- arthritis
- diabetes
- spinal cord injuries
- frailty and aging
- knee and hip replacement

Provides ideal exercise and therapy for patients of:

- physical therapists
- rehabilitation facilities
- long-term care centers
- continuing care retirement communities
- fitness & wellness centers
- medical research

Assists patients who do not have the strength or endurance to use non-motorized, traditional exercise equipment:

improves and/or increases:

- muscle tone
- stamina
- flexibility
- balance & range of motion
- circulation
- gait
- independence

decreases:

- fatigue
- swelling
- unsteadiness and falls
- weakness
- frailty
- muscle tightness

The Theracycle "smart motor" helps your patients move... and feel better!

And Theracycle is the only motorized exercise machine on the market that helps your patients get a full-body workout—arms, legs and torso.

The Theracycle PRO is built to last, engineered for decades of use. The durable, heavy-duty frame won't tip or vibrate. The easy-to-use instrument panel features computerized speed and time settings.

We designed the extra-wide swivel seat for safety and ease of access. And your patients feel safe because the motor can be stopped in a fraction of a second.

The Theracycle helps fight fatigue, improves circulation, flexibility, endurance and overall well being. With the Theracycle PRO, your patients can gently and safely move their whole body, even if they are physically challenged.

"The Theracycle offers our residents a wonderful alternative to traditional stationary exercise equipment. The Theracycle motor assists residents in moving both upper and lower body through a full range of motion, employing passive and active assistance."

Evelyn O'Neil, BS, CTRS

Manager of Outpatient Fitness – Hebrew Senior Life, Hebrew Rehabilitation Center Boston

new THERACYCLE PRO

"I highly recommend the motorized Theracycle to all orthopedic and neurological physical therapists. The motor of the Theracycle allows my patients to receive a forced exercise regimen which helps them to form new neurological pathways, improving gait and balance."

Marc Phillips PT, MPT, CSCS
Falcon Physical Therapy, Colorado Springs, CO

- **whisper quiet, extra powerful US-made motor**
for years of trouble free service
- **swivel seat for easy and safe mount and dismount**
 - **extra-large padded seat and back support**
for user comfort and safety
 - **multiple built-in safety mechanisms**
to instantly stop pedal for total safety
- **simple to read and operate computer controls**
for ease of use by both staff and patients
- **easily adjustable pedals and seat configuration**
for to accommodate different users

The Theracycle PRO has an optional adjustable foot strap to accommodate those with foot and ankle weakness. It also makes for more efficient pedaling—and the removeable calf support bar can be raised or lowered easily to provide even greater stability.

For those who don't require extra support, the regular pedal provides a simple strap.

Small business tax credit:

Federal ADA tax credit up to \$5,000 per year to qualified users for the purchase of adaptive equipment by small businesses
